- **World's First And Only  
Inline Post-Binding Finisher**
- **Pages Turn on Hingelines**  
*Keeps Binding Strong*
- **Perfect for Digital Printing**  
*Color and Glossy Sheets*
- **Optional Hardcover Kit**  
*Upgrade at an additional cost*
- **User-Friendly**  
*No training required*

# DigiPerfect

On Demand Perfect Binder

The fully self-adjusting book clamp uses a sophisticated array of sensors to automatically clamp books to optimum pressure – no set-up required. Change to thicker books or thinner books without any adjustment – or work faster in hands-free Full-Automatic mode.

Professional combined **milling and notching** process gives you the flexibility to bind different stocks, folded signatures, and more. Dependable components deliver high performance: **sturdy double-tooth milling tools** prepare the spine effectively for glue application.

Control virtually every function from the simple digital keypad. No tools or physical adjustment required. View settings at a glance. Control cycle speed, nipping force, milling, and more. Setup is quick and easy, simplifying your binding job.

Powerful automation also enhances the cover nipping station, digitally compensating for book thickness, and DFG **UltraSquare™** technology ensures a consistently strong, square bind. Nipping force is digitally controlled, and can be customized for the best binding results possible.

## Centralized Reproduction Department

Quick completion times for binding, plus fully automatic push-button operation. No training needed.

## On-Demand Environments

Quick turnaround times for any size book, and great quality for both books and padding, make it an ideal solution for busy workgroups.

## Commercial Printers / Binderies

Fast, high-quality outputs and no adjustment make it perfect for mock up or on-demand hard cover binding.

## Quick Printers

Easy to use, low acquisition and running costs, and small foot-print suit a Quick Print environment perfectly.

## Specifications

<b>Machine Cycle*</b>	250 Cycles per hour
<b>Book Thickness</b>	2 Sheets up to 1 3/4"
<b>Book Size</b>	Spine Length of 13"
<b>Warm Up Time</b>	25 Minutes
<b>Dimensions</b>	55" x 25" x 40"
<b>Weight</b>	364 lbs
<b>Voltage</b>	110 Volts / 60 Hz
<b>Spine Prep</b>	Mill and Notch

\*Depending on operator skill and glue type used

## Hingleine Creasing

Creating a hingleine is essential for binding color and glossy pages. Without a hingleline, pages turn on the spine, reducing the strength of the spine. Hinglelines create a weak point for pages to turn on which keeps the binding strong. Pages always turn at the same exact point, thus preserving the color and image on the page at the spine.
